

# *Meet*

flexible space

## Let us introduce you to Meet....

Developed to provide a flexible system that includes frames & panels designed to create customised structures that meet all your privacy and technological needs. Meet can adapt to any environment and can provide the levels of privacy required for a modern workspace.

## Who we are

Panel UK is a proud British manufacturer in the North of England. Established in 1999, we have unrivalled experience within the global office furniture industry exporting to many countries. Where other companies import product we design, fabricate & assemble, by hand, each & every product to the highest of quality standards. Our in-house skills allow us the flexibility to offer a truly unique service, including bespoke products if needs be, suited to your project's precise needs.

## What we do

Our guiding principles are to use recycled raw material, the least components & have a highly skilled workforce to create reusable & reconfigurable products of the highest quality, least impactful on the environment at an affordable cost. Our products are insightfully designed, & responsibly manufactured using lean methodologies to reduce waste. We are innovative where possible, with a specific emphasis on recycled content as well as the processes we operate, we are fully committed to a low carbon society.

## Sustainability

The focus & drive of everything we do is to protect the environment through sustainable design & manufacturing, to create a better & more prosperous world to live in. We do this by designing products that last, using recyclable materials, with a local UK labour force. Our carbon footprint is small, we source components locally, where possible, & endeavour to minimise our impact on the environment.

Established in 1999.

# Features and Functions

Meet is constructed with durable high-grade aluminium, it ensures both structural stability and a sleek, modern robust appearance.

The Aero wall option of Meet allows light and sound to pass through easily offering a subtle level of privacy to concentrate if so required.

We can supply decorative panels in ply or wood effect as well as paint them solid colours allowing you to unleash your creativity.

Using a two-pass powder coat paint process our best-in-class finish provides a quality, lasting finish to all exposed metalwork. We can even supply the framework in a wood effect to soften the aesthetic.

There are numerous wall options designed to be configured to your exact needs, whether it is to collaborate or work individually.

You can integrate power and AV equipment into a wall option on Meet. The panels can be either upholstered, laminate or back painted glass.

The wall structures are dual faced which allows you flexibility to configure your space just how you need it.

We can supply back painted glass in a number of colours or dry wipe boards to provide a collaboration space or just an ideal place to 'Meet'.

## Adaptable & Flexible Space

Meet's sleek design and the variety of options and material finishes offer a stylish solution to your space defining requirements without the need to compromise on functionality or aesthetics.

Meet offers a solution for all your workspace needs, from individual focus space to full team collaborations, there is a Meet variant for all your needs - configure it today.

FABRIC

RE-SPUN by Inloom is created by recycling old garments which are collected from recycling bins and taken to the factories to be sorted into clothes which can be resold as pre-loved or cut into rags to start the production of creating recycled wool. The sustainability of the process is added to by the almost complete elimination of dyes because of the way the wool is recycled, helping to safeguard the planets natural resources.
