

Solar

focus space

Reduce distraction in the office

Modern agile workplaces are being created with the focus on activity rather than solely being present. Solar can create unique spaces within current environments providing solutions for concentration, collaboration, focus, meetings, sharing and relaxation.

Who we are

Panel UK is a proud British manufacturer in the North of England. Established in 1999, we have unrivalled experience within the global office furniture industry exporting to many countries. Where other companies import product we design, fabricate & assemble, by hand, each & every product to the highest of quality standards. Our in-house skills allow us the flexibility to offer a truly unique service, including bespoke products if needs be, suited to your project's precise needs.

What we do

Our guiding principles are to use recycled raw material, the least components & have a highly skilled workforce to create reusable & reconfigurable products of the highest quality, least impactful on the environment at an affordable cost. Our products are insightfully designed, & responsibly manufactured using lean methodologies to reduce waste. We are innovative where possible, with a specific emphasis on recycled content as well as the processes we operate, we are fully committed to a low carbon society.

Sustainability

The focus & drive of everything we do is to protect the environment through sustainable design & manufacturing, to create a better & more prosperous world to live in. We do this by designing products that last, using recyclable materials, with a local UK labour force. Our carbon footprint is small, we source components locally, where possible, & endeavour to minimise our impact on the environment.

PANEL

Established in 1999.

Features and Functions

Solar is an acoustically enhanced product designed to reduce noise and distractions. The acoustic performance of the panel construction has been independently evaluated in a research laboratory following the guidelines found in BS EN ISO 354:2003 (Acoustics: Measurement of sound absorption in a reverberation room).

Solar is also available in a media booth variant with a central AV system, including power & data, for video conferencing or team presentations.

The upholstered seats use soft foam inserts so as the seating is comfortable for longer periods than normal - being comfortable promotes attention.

The single person booths can have heightened glass inserts to enhance the acoustic performance of the booth & to provide that extra little bit of privacy.

Solar units come with fully adjustable levelling feet so even the most uneven floor can be accommodated.

The panels can be mounted to face a number of ways and form junctions for adjoining screens. This gives you the greatest flexibility to configure your space just how you need it or even change it in the future for your changing workspace needs.

Options

You can specify Solar in a number of configurations - take a look at the options below.

1 Person Booth

2 Person Back-2-Back

2 Person Side-By-Side

3 Person Reverse Facing

4 Person Cruciform

1 Person Glazed

1 Person Curved

2 Person Curved

Media Booth

4 Person Cluster

Standalone Screen

6 Person Cluster

Creating focus space for teams

Solar is your noise barrier, acoustically enhanced to separate you from the distractions in the workplace. Worktops can be positioned to suit your working style, and soft seating can make your Solar a comfortable retreat.

Solar's modular design & unique junction system enables numerous configurations to be constructed with shared components, unlike other acoustic work systems which extend their configurations by just placing stand-alone units back-to-back.

Finishes

Finishes

A wide range of finishes enhances Solar's flexibility. Both plain and quilted fabrics are available. Panels can be chosen in matching or contrasting fabrics depending upon your design. The worktops are available in the below finishes and can be supplied with a matching edge or contrasting edge - others are available upon request.

WOOD

White

Oak

Maple

Walnut

FABRIC

RE-SPUN by Inloom is created by recycling old garments which are collected from recycling bins and taken to the factories to be sorted into clothes which can be resold as pre-loved or cut into rags to start the production of creating recycled wool. The sustainability of the process is added to by the almost complete elimination of dyes because of the way the wool is recycled, helping to safeguard the planets natural resources.
